
Experience

Signalor (Founder, October 2025-Present)

- Engineered scalable data ingestion pipelines to handle >100K scraped data points from social media and news platforms.
- Developed multi-agent analysis pipelines using orchestrated LLM workers and weighted embedding similarity with semantic clustering to transform unstructured public data into analytical reports for market research.

Triton Trading Group (Quantitative Researcher, Jan 2026-Present)

- Co-developed and maintained flagship quantitative strategies, which were live deployed in April 2026 and have achieved 45.8% returns in 6 weeks, outperforming the S&P 500 by 32% (paper trading, after taxes and fees).
- Engineered models maintaining a Sharpe ratio of 1.85 and a Sortino ratio of 2.27 in out-of-sample testing.

CCPorted (Founder, August 2024-February 2026)

- Scaled website to 100K recurring MAU through organic growth and search engine optimization (SEO).
- Implemented client side caching and runtime wrapper to reduce bandwidth cost by 99.7%.
- Built distribution platform and caching network for >400 video games.
- Designed and released proprietary game titles ('CCPorted Originals') accumulating 100K+ plays.
- Scaled deployment infrastructure across Cloudflare CDN and AWS CloudFront edge networks.

Lawnly (Mobile App Development Intern, October 2025-February 2026)

- Served as primary Android developer on a team of 25.
- Built >30 new mobile pages by integrating and building RESTful routes to achieve parity with web UI.

Independent Contractor (September 2025-Present)

- Designed and built Triton Trading Group's (non-profit) website with Svelte, achieving a PageSpeed score of 97.5.
- Designed and built Startup Incubator Club's (cross-campus org) website and backend architecture, supporting >50 club members and 8 startups' attendance, blog postings, and email automation.
- Lead developer for RunClub, a running club management platform, built the entire technology stack including web dashboards, club management pages, payment processing, and mobile app.

Education & Awards

UC San Diego (Double B.S. Computer Science & Mathematics, expected graduation June 2029)

- Organized and led technical workshops, competitions, and certification series for ACM UCSD.
- Mentored a team of first-time developers through building a dining hall DoorDash.
- Assistant instructor for 35+ students at ACM-Hosted full-stack development bootcamp.

Awards/Recognitions

- 1st Place overall out of 134 teams at UCSD's DiamondHacks, the largest on-campus hackathon by participants.

Projects

Forge Game Engine (July-September 2025)

- Built for CCPorted (using Supabase, TS, and HTML), to quickly move games from idea to production.
- Games are created using a node-tree architecture to quickly add functionality to components.
- Supports >2K active colliders, including concave polygons, within a scene at 60 FPS.

AdHoc (May-August 2025)

- Built a full-stack ad network from scratch, serving targeted inventory to partner sites using only site and inventory context.
- Ad inventory is processed with AWS Rekognition and a keyword extraction model.
- Implemented Q-learning based ad recommendation tuning using engagement and inventory signals.

Skills

Languages: C++, C#, Java, Python, TypeScript, JavaScript, SQL

Frameworks & Infra: React, Svelte, Node.js, WebSockets, REST APIs, Docker, AWS, GCP, CI/CD, Linux

Data & AI: RAG, LLM orchestration, agentic pipelines, machine learning, Redis, Prisma

Quantitative: Algorithmic trading, backtesting, risk management, stochastic modeling, linear algebra, MV calculus
